Key Insights

Returns are a major revenue concern - Around 24.8% of orders were returned, resulting in approximately 1.1M in lost revenue. Cash payments and Chairs show particularly high return rates.

Higher discounts do not increase order value - Average order value decreases from approximately 3,067 at 0% discount to 2,686 at 15% discount, indicating that deeper discounts may not be effective.

Free shipping performs strongly - FREESHIP generated the highest net revenue (933K) compared with percentage-based promotions such as SAVE10.

Large orders contribute most of the revenue - Although Small orders occur frequently, Large and Bulk orders contribute significantly more revenue.

Sales have no consistent monthly trend - Sales fluctuate over time without a steady pattern. Revenue increased only slightly from 1.26M in 2023 to 1.35M in 2024.
